Mental health is just as important as physical health—but it's often overlooked or misunderstood. Let's break down the basics and learn how to take care of our minds.

What is Mental Health?

Mental health includes our emotional, psychological, and social well-being. It affects how we think, feel, and act—especially how we handle stress, relate to others, and make decisions.

Signs you Could Be Struggling

- Constant fatigue or low energy
- Feeling numb or detached
- Irritability or mood swings
- Changes in sleep or appetite
- Losing interest in things you used to enjoy

It's Okay to Ask for Help

Struggling with your mental health doesn't make you weak. Reaching out is a sign of strength. Whether it's talking to a friend, a family member, or a professional—it can make a world of difference.
